

Mars Campaign

NASA's Journey To Mars

Key Messages

In our lifetimes, NASA and its partners can answer some of humanity's fundamental questions about life beyond Earth:

1. Was Mars home to microbial life? Is it today?
2. Could it be a safe home for humans one day?
3. What can it teach us about life elsewhere in the cosmos or how life began on Earth?
4. What can it teach us about Earth's past, present and future?

Today, our robotic scientific explorers are paving the way. Together, humans and robotics will pioneer Mars and the solar system.

We know there are solvable challenges for human missions to Mars:

1. Getting there
2. Landing
3. Living and working on Mars
4. Safely returning

We believe the journey is worth the risks.

The endeavor will improve lives on Earth by advancing:

1. Scientific knowledge and discovery
2. New technologies
3. Economic opportunities (as all giant leaps in transportation and exploration have)
4. U.S. leadership in the peaceful, international exploration of space
